PROFESSIONAL SUMMARY

I have spent 21 years shipping software and the last four building AI systems that had to survive contact with real users. Five months into SAP, Fleet was running as a governed agentic system on live HANA data, with trace capture and decision logs wired in from the first commit, because a runtime that cannot explain itself cannot be improved. That repo now has 39 contributors and its first production agent ships in November. Before SAP I founded Tengrai and grew it to 400,000 registered users across 150 countries on A100 clusters, which is where I learned that the gap between what the field discovers and what the product absorbs is an infrastructure problem (not a process problem). What I bring here is startup velocity with enough platform depth to make it stick inside.

TECHNICAL SKILLS

Core AI & Product

Building compounding systems

Agent Runtime

Data/KG architectures

RAG/Models/Decisioning

Vertical Product Architecture

FDE-to-Product transformation

Autonomous Operations

Languages & Frameworks

Python

TypeScript

JavaScript

React

Node.js

Next.js

C++

Rust

CAP

Cloud & Infrastructure

NVIDIA DGX SuperPOD architecture

AWS

GCP

Microsoft Azure

Docker

Kubernetes

Kubeflow

Kyma

Terraform

Nomad

Slurm

SAP BTP/BAIP

ML Ops

Snowflake

Databricks

Apache Kafka

Apache Spark

Airflow

AI/ML

PyTorch

SAP HANA

PROFESSIONAL EXPERIENCE

Principal AI Architect | SAP SE

March 2026 – Present

- Architected and governed enterprise-grade AI architecture: the Fleet project
- First live deployment scheduled for November 2026 as the Quote Agent, the opportunity to approval agentic solution, but already a working agentic system (reached this state in less than 3 months since project start)
- Demonstrated the use of CAP for real-world AI agents at reCAP conference this year in Sankt Leon-Rot
- Created A2UI5, an LLM to SAP Fiori UI5 components streaming solution, including relevant SDK packages
- Established observability, governance and compliance controls for AI deployments in Fleet project that can later serve as AI-enablement
- Designed trace-capture pipelines, improving observability, reducing model drift detection time 75% across all target use-cases
- Led selection and deployment of agent-runtime and tool-orchestration, reducing inference costs and enabling scale
- Introduced others to the repo, now reaching 39 contributors, while still acting as the most active maintainer of fleet with over 700 commits.
- Frequent conference speaker at events organized by third parties and internal SAP events (d-com, reCAP, Predictive Summit)
- SAP Global Mentor and Job Shadowing Host (with 10 shadows currently)

Head of Artificial Intelligence | Magic Solutions

September 2025 – March 2026

- Led organisation-wide AI readiness transformation using KUA method, operationalising AI operating model, onboarded 30+ staff in two months
- Delivered high-profile B2G AI project from prototype to UAT in two weeks, satisfying agency timelines for deployment
- Strengthened delivery governance by formalising workflows and escalation, improving traceability and cutting review cycle 35% across product teams
- Shaped project architectures and selected tooling for new AI initiatives, accelerating FDE-to-product transformation 50% across six pilots
- Implemented continuous learning loop, doubling model iteration velocity and reducing feedback latency 60% for production models

Founder, CEO | Tengrai Artificial Intelligence

October 2022 – August 2025

- Orchestrated continuous model iteration on NVIDIA A100 HPC clusters, earning EuroCC recognition as an HPC success story
- Scaled product to 400,000 registered unique users, reaching 150+ countries with paying subscribers in 60+ countries
- Founded and scaled Europe-based generative AI product end-to-end, establishing learning loop and experiment traces, reaching 400k users
- Designed privacy-by-design architecture, authored model card, and implemented decision logs for compliant deployments across 60+ paying countries
- Established reproducibility and transparency practices, versioned release notes and experiment traces supporting 400k users

Founder and Executive Director | AceTech Development

October 2018 – October 2022

- Scaled from 0 to 40+ employees in under two years.
- Sustained 100% retention during tenure.

Blockchain UX Consultant | CasinoCoin

September 2017 – October 2018

- Solution was stable with 1,000 transactions per second with 3–5 second confirmations.
- CSC had a market capitalization ≈\$40 million USD at that time.

Senior Manager UX/UI | Flutter Entertainment

September 2015 – May 2017

- Contributed to an award-winning free-to-play title (Duel, recognised in 2016).
- We reached beta in 6 months after day 0.

User Experience Director | whatusersdo.com

August 2014 – September 2015

- Delivered high-impact programmes for enterprise and public-sector organisations, with a portfolio including Government Digital Service, Virgin Atlantic, Marks & Spencer, O2, Ryanair, and Cisco.
- Created and launched the UX Jumpstart digital apprenticeship programme.

User Experience Manager | Cylex

April 2013 – August 2014

- Owned UX direction across a portfolio of 50+ country-specific business directories.

EDUCATION

UMFST "G.E. Palade" of Târgu Mureş

Research Doctorate – Artificial Intelligence

October 2018 – Present

All But Dissertation

Universitatea "Petru Maior" of Târgu Mureş

Master's degree, Graphics and Industrial Design (Grafică şi Design Industrial)

October 2007 – June 2008

Babes-Bolyai University

Bachelor's Degree, Communication and Public Relations

September 2003 – July 2007
